FH-7322
Proposed

Subject: Future Utilization of SCL Breadboard Equipment,
Request For

Attention: [redacted]

Dear [redacted]

STAT

STAT

STAT

Pursuant to the writers recent telecons with SFO personnel [redacted] we are pleased to forward the enclosed Technical Proposal (J-5352), recently submitted to AFSC, WPAFB wherein the utilization of the Breadboard SCL is an integral requirement.

Presuming this contractor would be the successful bidder, actual use of the Breadboard SCL equipment would be conducted strictly on the following basis:

- (a) Absolute non-interference with the contractor's effort under contracts AF33(657)-12270, -12243, or -12246.
- (b) No physical modifications will be made to the SCL equipment, all additional circuitry (Bionic) will be external and adapted to the SCL equipment by suitable harnesses, connectors, etc.

With regard to the period of performance it is this contractor's understanding that a Government Go-Ahead by February 1965 is intended. The SCL Breadboard is planned to be utilized 6-7 months after Go-Ahead for a period of approximately four (4) months. This would mean that the equipment would be utilized in the period August through November 1965.

As an added factor, one not previously known to the writer, it is also requested that consideration be given to the use of an IO Simulator, said device being integrately involved in SCL operation. Here again the equipment (IO Sim.) will be used in accordance with (a) and (b) above.

This contractor trusts all pertinent factors have been accurately stated and that the J-5352 Proposal has been compiled in a proper, non-disclosing manner.

Favorable endorsement of the contractor's request to use the equipment (s) as indicated will be sincerely appreciated. Please contact the undersigned in the event additional information is required.

Regards,

Jim
